DETAILED ACTION

Allowable Subject Matter

1. Claims 4,8, and 12 are allowable over the prior art of record.
2. The following is a statement of reasons for the indication of allowable subject matter: .

As per claims 4,8, and 12, the recited claim limitations pertaining to a speech recognition system utilizing a sounds like spelling scores in conjunction with a two layer voice recognition process is not explicitly taught by the prior art of record.

Claim Rejections - 35 USC § 103

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hutchins (5208897) in view of IBM Technical Disclosure Bulletin (Vol. 35, Issue 1a, pp 59).

As per claims 1-3,5-7,9,10 Hutchins (5208897) teaches:

obtaining a word inscription specified by a user as ascii spelling of subsyllable
(Fig. 4a)

“searching a word dictionary.....corresponding to a word inscription” as
dictionary searching (col. 9 line 48 – col. 11 line 42)

“searching a pronunciation dictionary.....to obtain a base form” as
pronunciation/phonetic influences (col. 9 lines 13-45)

“registering the base form into a dictionary” as base form in the dictionary (col. 9
line 50 – col. 10 line 58)

Hutchins does not explicitly teach the use of ‘sounds-like-spelling’ technique in the dictionary functions, however, IBM TDB teaches the use of ‘sounds like spelling’ in the Tangora Automatic Speech Recognizer (see disclosure text). Therefore, it would have been obvious to one of ordinary skill in the art of speech recognition to modify the teachings of Hutchins with a ‘sounds like spelling’ technique because it would advantageously allow user to enter the information more accurately than the phonetic pronunciations (IBM TBD, disclosure text, near the end).

As per claims 2,6,10, the combination of Hutchins (5208897) in view of IBM TDB teaches:

“sounds like spelling score” as scoring the sounds like spelling (IBM TBD)

Art Unit: 2654

As per claims 2-4,6,7,10, and 11, the combination of Hutchins (5208897) in view of IBM TDB teaches displaying the sounds-like spelling (IBM TBD, lines 9-14)

As per claims 2-4,6,7,10, and 11, the combination of Hutchins (5208897) in view of IBM TDB teaches determining a pronunciation score and threshold (Hutchins, Fig. 7, see related text of explanation of fig. 7)

As per claims 2,6,10, the combination of Hutchins (5208897) in view of IBM TDB teaches showing system status and recognition results (Hutchins, fig. 3)

As per claims 3,7, and 11, the combination of Hutchins (5208897) in view of IBM TDB teaches retrieving voice information, matching, and a second voice pronunciation matching (Hutchins, col. 32 line 1-31).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Breedlove (4749353) teaches a spelling controlled word list; Frantz (4507750) teaches an electronic apparatus separate from a host language.
